

Sangfor Access

Cloud-based SASE for Branch Offices & Remote Users

- ✓ Unified management of users and security policy enforcement
- ✓ Ensures secure internet access for remote users to applications and data

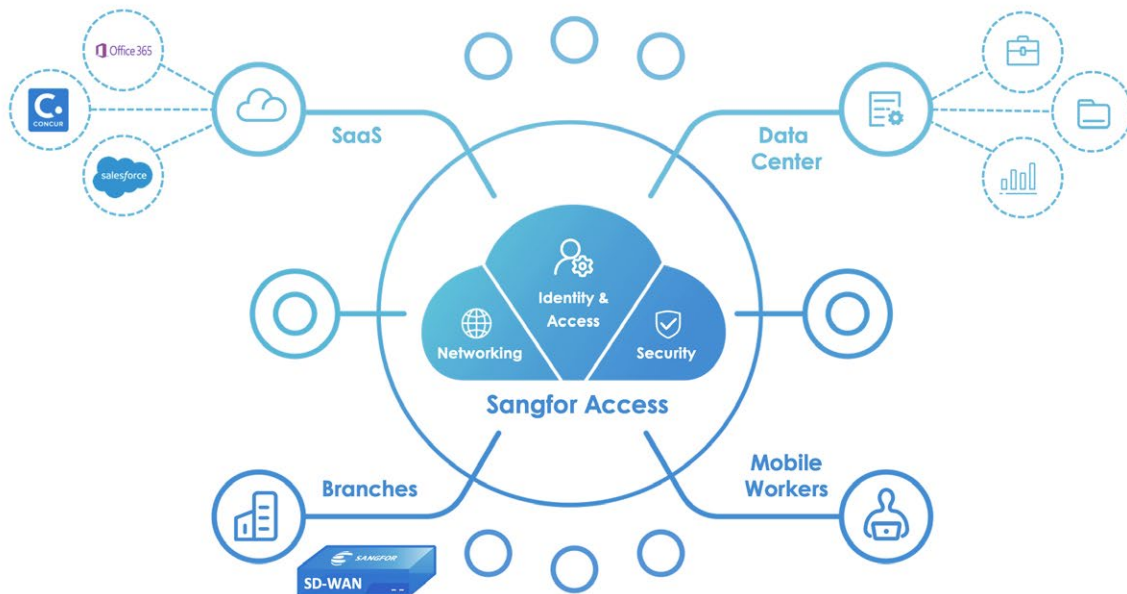

What is SASE?

Secure Access Service Edge (SASE) is security technology made famous by Gartner in 2019. Sangfor's SASE global cloud-based service delivery model integrates network and security functions to create a unified service, enabling the fast identification of cyber threats and malicious traffic, and delivering a wide range of security functions including SD-WAN, WAN optimization, SWG, CASB, NGFW and ZTNA/SDP.

Sangfor Access

Sangfor Access is a native cloud-based SASE specifically designed to securely connect your branch office or remote users to business applications. Branch offices can either use their existing routers or Sangfor SIER to leverage SD-WAN connectivity, so that all traffic routes lead to Sangfor Access. Remote users install a lightweight client on their laptop to enable all relevant traffic routes to Sangfor Access.

By design, Sangfor Access is the powerful core and driving force behind networking, identity, access, and security. First, Sangfor Access verifies user identity via authentication and only grants access to authorized business applications based on preconfigured policies and user profiles. Sangfor Access provides 24x7 protection for branches and remote users from known and unknown threats like phishing, malware and ransomware. Audit capabilities also monitor for any misuse of corporate applications or data leakage violations and provide productivity monitoring for remote users.

Key Business Benefits of Sangfor Access

Improved Productivity

Branch office remote users can connect business applications to your data center or SaaS, without redirecting all traffic through headquarters, lowering bandwidth cost and improving user experience.

Simpler to Operate

Smart and centralized management using a single cloud-based platform.

Highly Scalable

It's easier to deploy new locations or users, allowing customers to grow their branch and remote access quickly, without any worries or hassles.

Pay-As-You-Grow

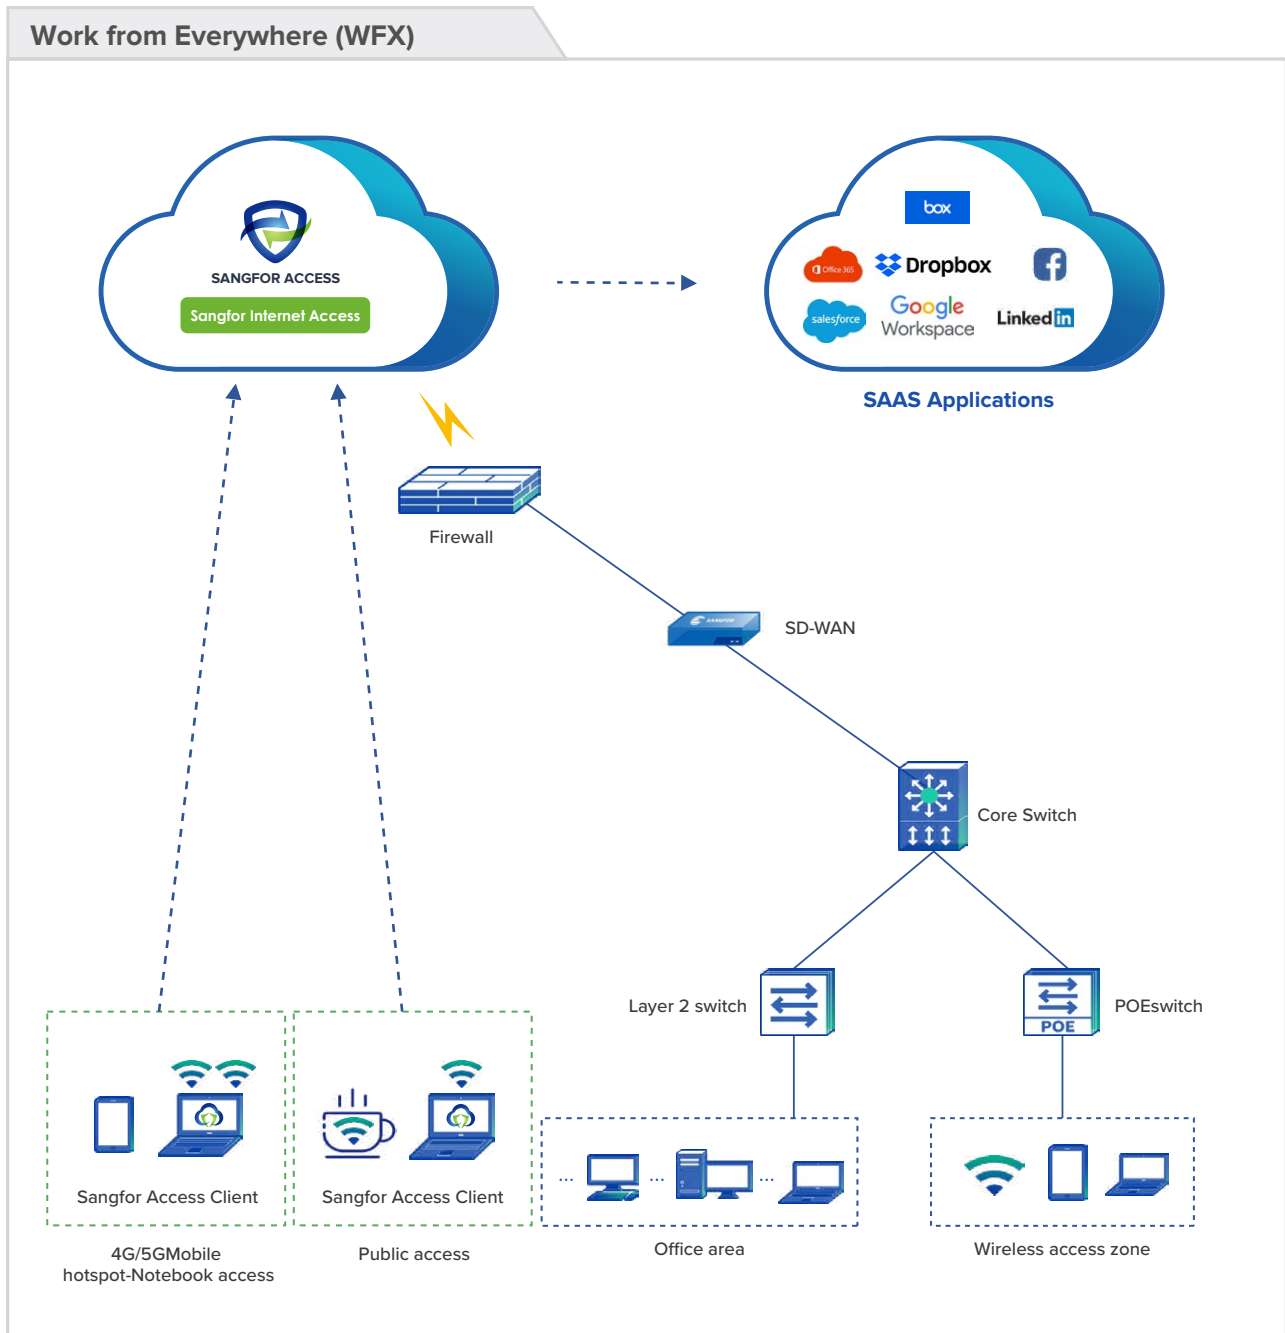

Subscription model to match your business strategy as you grow with reasonable OPEX.

Highly Reliable

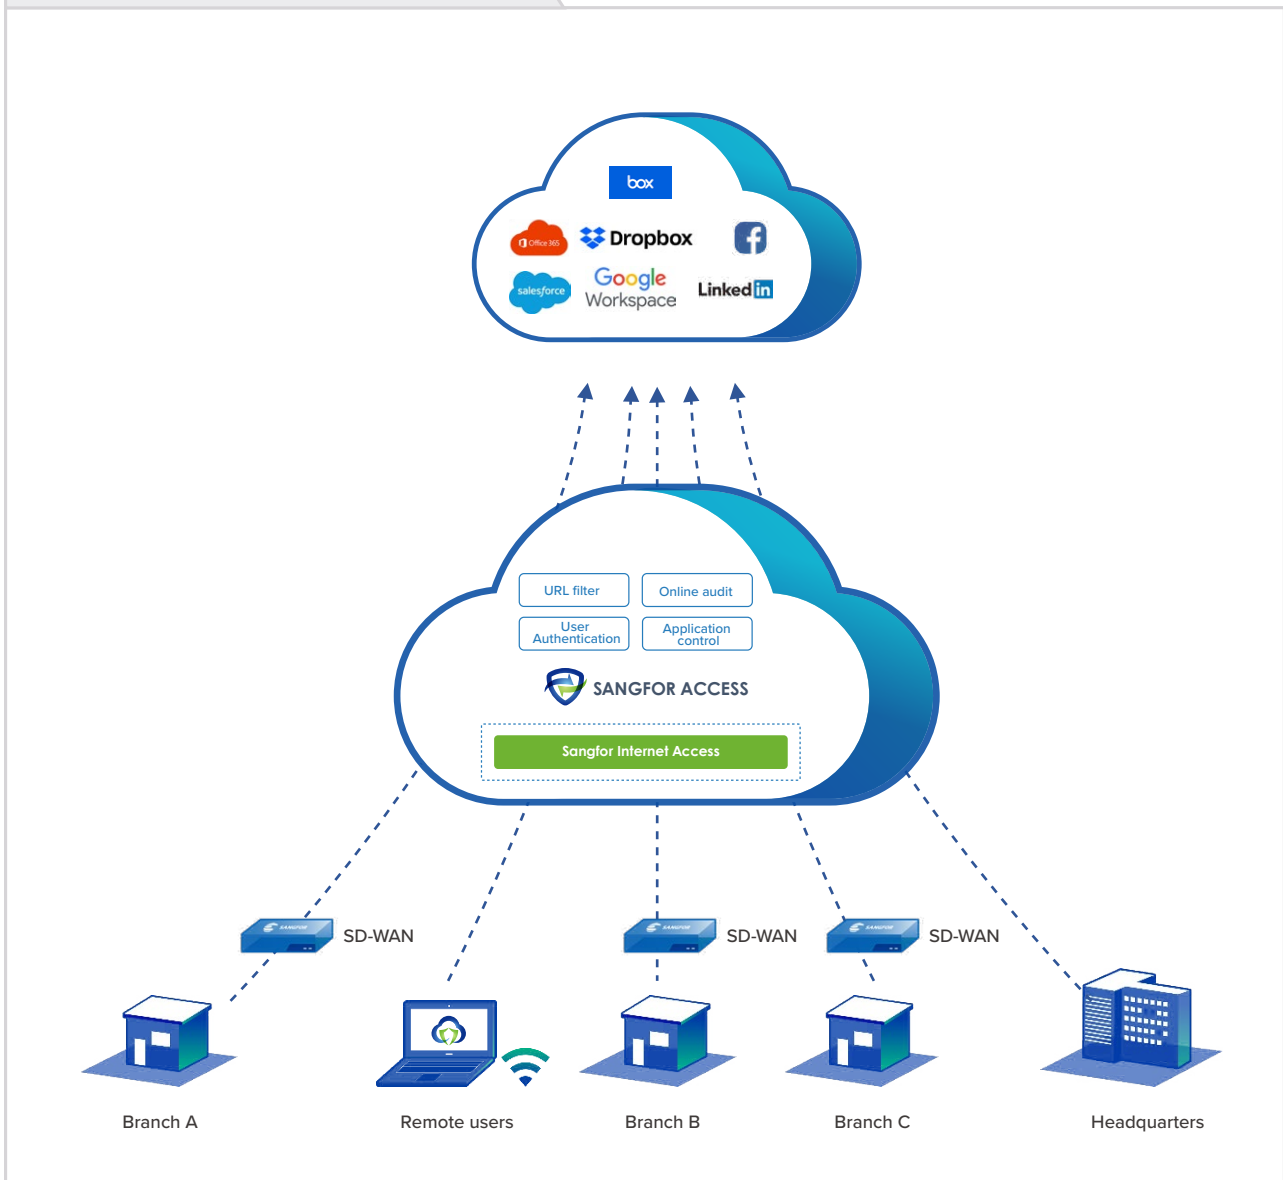

Remote or branch office users can connect to business applications through your data center or SaaS without re-directing all traffic through headquarters, lowering bandwidth cost and improving user experience.

Use Case Scenarios

With users now connecting from everywhere, traditional network security solutions are no longer effectively protecting users in addition to presenting several critical challenges. Sangfor Access, provides web security protection profiles with augmenting audit capabilities, to protect and defend remote users whenever they access the Internet using a Sangfor Access Client.

Multiple Branches

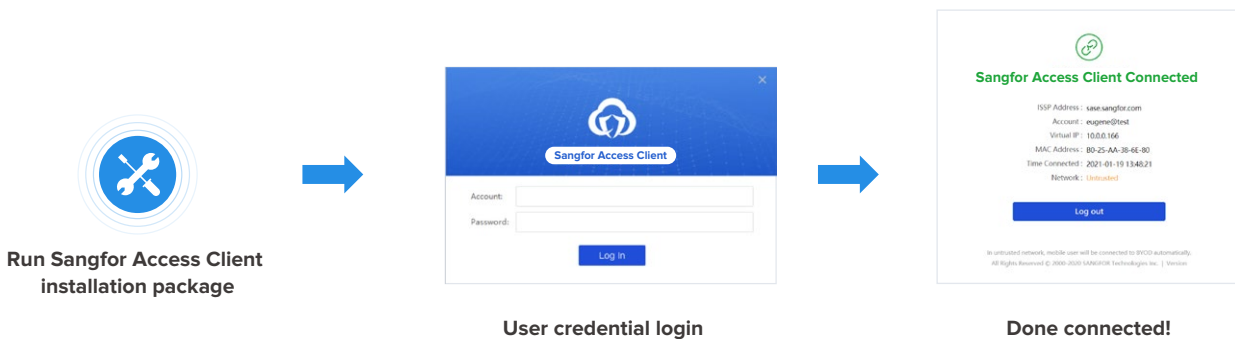

Many companies must secure their internet access without purchasing expensive, on-premise gateway or man-in-the-middle protection. When Sangfor Access is deployed, and Sangfor Access Client installed, users are automatically protected.

Sangfor Access Deployment

• Sangfor Access Client

Users need only to install Sangfor Access once and enter the necessary credentials to get directly online. Once users are connected, all necessary policies will be pushed down to the users immediately who will then always be automatically connected to the Sangfor Access, whenever internet access is available.

• SIER

With SIER, users from multi branch can connect to Sangfor Access transparently while enjoying benefits of SIER bandwidth management, intelligence path selection, user behaviour, Wi-Fi and 3G and 4G in a single solution.
