Sangfor CM (Central Manager) is a next-generation centralized management platform designed to simplify multi-branch management and operation for enterprises. In addition to comprehensive policy management, Sangfor CM is equipped to display branch status and orchestrate all business operations from a single centralized location.
Simplified Multi-Component Management

One Sangfor CM is capable of simultaneous management of multiple Sangfor products (MIG, WANO, IAG, NGAF and aBOS).

Operation Visualization

With clear and comprehensive branch status display in a map format and VPN status as topography, IT managers can visualize all operations and quickly identify any abnormalities or issues.
**Business Orchestration**

Sangfor CM supports auto-VPN network orchestration and makes branch policy distribution quick and uniform. Star networks, tree networks or full mesh networks are easily connected and managed by IT Managers using Sangfor CM.

Sangfor CM enables intelligent SD-WAN path selection dependent on business needs, maximizing WAN link value and improving business reliability.

**Unified Management**

Sangfor CM supports unified firmware upgrades and branch license management without requiring an on-site engineer, greatly simplifying and streamlining IT Manager daily operations.
